UML Class Diagram (overall)

Entities

Assignment

- assignment_id : int
- module_id : int
- name : str
- due_date : date
- max_marks : int
- students : List[Student]

+ __init__(assignment_id: int, module_id: int, name: str, due_date: date, max_marks: int)
+ add_student(student: Student) : None

AuditLog

- log_id : int
- user_id : int
- action_type : str
- table_name : str
- record_id : int
- timestamp : datetime

+ __init__(log_id: int, user_id: int, action_type: str, table_name: str, record_id: int, timestamp: datetime, description: str)

Course

- course_id : int
- name : str
- director : str
- education_level: str
- modules : List[Module]

+ __init__(course_id: int, name: str, director: str, education_level: str)
+ add_module(module: Module) : None

Module

- module_id : int
- name : str
- credits : int
- leader : str
- courses : List[Course]
- assignments : List[Assignment]

+ __init__(module_id: int, name: str, credits: int, leader: str)
+ add_course(course: Course) : None
+ add_assignment(assignment: Assignment) : None
+ add_session(session: Session) : None

Session

- session_id : int
- module_id : int
- start_time : time
- end_time : time
- date : date
- students : List[Student]

+ __init__(module_id: int, start_time: time, end_time: time, date: date)
+ add_student(student: Student) : None

Student

- student_id : int
- first_name : str
- last_name : str
- address : str
- course_id : int
- education_level : str

+ __init__(student_id: int, first_name: str, last_name: str, address: str, course_id: int, education_level: str, year_of_study: int, email: str)
+ add_session(session: Session) : None

UserAccount

- user_id : int
- username : str
- email : str
- role : str
- logs : List[AuditLog]

+ __init__(user_id: int, username: str, email: str, role: str)
+ add_log(log: AuditLog) : None

Wellbeing

- wellbeing_id : int
- student_id : int
- date : date
- stress : int
- activity : int
- food_quality : int

+ __init__(wellbeing_id: int, student_id: int, date: date, stress: int, activity: int, food_quality: int, alcohol_drugs: int, hours_slept: float, comment: str)

StudentSession

- student_id: int
- session_id: int
- status: str
- notes: str
- timestamps: List[datetime]

+ __init__(student_id: int, session_id: int, status: str)
+ mark_present()
+ mark_absent()
+ mark_late()
+ add_note(note: str)

StudentAssignment

- student_id: int
- assignment_id: int
- status: str
- grade: float
- submission_notes: str

+ __init__(student_id: int, assignment_id: int, status: str, grade: float = None)
+ mark_submitted()
+ mark_pending()
+ mark_late()
+ add_grade(grade: float)

Services

AssignmentServices
